FLUXER V2.66

Fluxer is an analysis tool and viewer for data cubes.

The first two axes are the spatial axes RA and DEC and must have the same sampling.
The third axis is the wavelength axis.

Fluxer runs in IDL 8.x and maybe in IDL7.x.

See www.ciserlohe.de/fluxer/fluxer.html to download Fluxer 2.66 and how to install it.

Every GUI has a 'Help' button that gives you explanations about e.g.
    how to set parameters.

Several tutorials are available from the main menu bar.

If you encounter any reproducable bugs in fluxer, please contact me and send a
    bug report : iserlohe@dsi.uni-stuttgart.de or christof@ciserlohe.de
